MOVS Rd, Operand2

Updates the N and Z flags according to the result.
Can update the C flag during the calculation of Operand2.
Does not affect the V flag.

When an Operand2 constant is used with the instructions MOVS, MVNS, ANDS, ORRS, ORNS, EORS, BICS, TEQ or TST, the carry flag is updated to bit[31] of the constant, if the constant is greater than 255 and can be produced by shifting an 8-bit value. These instructions do not affect the carry flag if Operand2 is any other constant.
