

A decentralized communication network with provable identities & group membership

Anton Yamkovoy, Master of Science in Computer Science
University of Dublin, Trinity College, 2022

Supervisor: Hitesh Tewari

In modern Social Networks centralization is prevalent, with utilization of user data, and pseudonymous identities within networks, we aim to propose, design and demonstrate the operation of a decentralized communication network with verifiable identities on the federated level, and provable group memberships in a privacy preserving manner through the use of a permissioned blockchain.
