Gary Gunn
SAP Internship
25/01/16-26/08/16

What Am I Working On?
The Product I’m working on is called Predictive Analytics

- **SAP BusinessObjects** is an enterprise software company, specializing in business intelligence.
- BusinessObjects was acquired in 2007 by SAP AG.

- **Predictive Analytics** is a data analytics platform that allows you to uncover trends and patterns from Big Data, the Internet of Things, and your existing data sources.
- It allows you to Automate predictive modeling to build models within minutes - and gain unprecedented insight into your customers, business, and markets.
- More specifically I’m working on Expert Analytics, a platform within Predictive Analytics for data scientists to apply machine learning techniques to their data in order to get the results they require.

Product Owner & Scrum Master Training

- So far, I have been invited to attend training for both a scrum master role and a product owner role.
- This training presented other opportunities to me outside of the domain of my role and provided me with insight as to what the purpose of these roles are.

What Can Trinity Do?

- I would have been better prepared for this internship if we had more modules on data science and machine learning.
- With Big Data becoming a big part of the tech world, mainly through IoT, I feel it is important for CS and Engineering students to know what can be done with all of this data.
