My duties as an Intern

January - Testing

• Assigned to the Eir project.

March – Begin development

• Given the task to test and develop the R6 platform.

August – End of Internship

Tester

• Simulate orders on a mock environment.

• Report any defects found.

• Pass or fail tests depending on the results.

Developer

• Review new functionality requested by Eir.

• Develop functionality.

• Create JUnit tests and run manual tests on a local environment.

Opportunities

• Enhance my learning through online tutorial site, Pluralsight.

• Take the lead in the daily stand up meetings. Greatly increases leadership skills.

Technologies being used

Java

Maven

NHibernate

AngularJS

Hibernate

MyBatis

jQuery

CSS

Joomla

JavaScript

MySQL

College skills brought to the workplace.

• Basic coding skills.

• Knowledge of how a database works.

• Logical thinking.

• Teamwork.

• Punctuality.

Constructive ideas for improving the internship process

• Testing is a vital part of a project’s life cycle. I believe that there should be more of an emphasis on Junit & manual testing throughout our education to prepare us for the real world.

• Development of a few projects which requires the use of technologies like JavaScript integrated with JQuery.

Student: Gavan Burke
Academic Supervisor: Carol O’Sullivan
Performance Manager: Rob O’Neill
